

The First Letter of JSL-ian Philosophy

From JSL-ian Technologies Founder

Building the Future Through Innovation

Technology has continuously transformed the way humanity understands the world and improves everyday life. JSL-ian Technologies was founded with the belief that meaningful innovation begins with curiosity, rigorous research, and the courage to explore new directions. Our goal is to develop practical technologies that contribute to future computing, digital infrastructure, and intelligent systems while creating lasting value for society.

Because the founder experienced great difficulty sharing his research with the mainstream mathematics community and AI assistants, the vision for JSL-ian Technologies gradually took shape.

Our Vision

Our vision is to build a new, open technology ecosystem where scientific research, engineering, and practical applications evolve together. We believe that every person possesses unique talents. Through innovation and technology, we strive to help individuals realize their full potential, contribute their strengths, and create meaningful value for humanity.

JSL-ian believes: "Your future decides your present and your past; your past and present do not decide your future."

Our long-term research directions include:

- Jing Space Theory (JST)
- JSL (Jing Space Law, and Language)
- Structural Computing
- Future Super Chip Architectures
- Quantum Computing
- Artificial Neural Synapse Systems
- Artificial Intelligence
- Future Digital Infrastructure

These research directions represent our commitment to exploring next-generation computing technologies and their practical applications.

Our Mission

Innovation becomes meaningful only when ideas can be transformed into technologies that people can use.

Our mission is to develop technologies that are practical, reliable, scalable, and beneficial to individuals, businesses, and society, while respecting nature and maximizing humanity's ability to explore truth.

The truth is Nature operates according to its own laws. No matter how higher level of human technology, it cannot fundamentally change those laws. What technology can do is better understand them and learn to live in harmony with them. Attempts to act against them ultimately bring consequences back to humanity.

At JSL-ian Technologies, we believe that every person is a unique world with unique talents, perspectives, and potential.

Our mission is to explore, nurture, and help each individual build that unique world through innovation and technology. We believe that the greatest achievements are those that not only fulfill personal potential but also create lasting value for others.

We are committed to developing technologies that empower individuals, strengthen communities, respect life, and contribute to a healthier, more sustainable future for humanity.

Our Value

At JSL-ian Technologies, our values are simple.

We believe that humanity's potential to explore the universe is limitless. Curiosity, creativity, and continuous learning are the driving forces behind innovation and human progress.

We value all life, respect all life, and strive to develop technologies that promote health, well-being, and the sustainable development of life.

We respect every individual's worldview, faith, culture, and chosen way of life. At the same time, we recognize that nature is interconnected through fundamental laws and relationships. We believe that lasting progress is achieved by understanding and working in harmony with these natural principles.

JSL-ian Technologies is committed to developing technologies that create meaningful and lasting value for humanity.

The JSL-ian Ecosystem

JSL-ian Technologies is building an ecosystem in which research leads to technology, technology enables products, products create services, and services connect people around the world. Our objective is to establish a sustainable technology platform capable of continuous evolution.

JSL-ian Coin

JSL-ian Coin is the digital credential of the JSL-ian ecosystem. It is designed to support participation across the technologies, products, and services developed by JSL-ian Technologies while encouraging long-term engagement within the ecosystem. As the ecosystem grows, JSL-ian Coin is intended to evolve together with the technologies and applications it supports.

JSL-ian Coin is not the purpose of JSL-ian Technologies. It is one part of a broader vision to build technologies that create practical value and contribute to the future of computing.

JSL-ian Engines

JSL-ian Technologies is also committed to developing next-generation computing technologies, including advanced computing engines, quantum computing architectures, artificial intelligence, and future chip designs. These engineering efforts provide practical pathways for validating and applying the company's theoretical research.

JSL-ian Final Goal

Although technological innovation is essential for human progress, the founder believes that technology itself is not the final goal. The ultimate purpose is to improve human health, well-being, education, and quality of life through continuous innovation.

Looking Forward

The future cannot be predicted, but it can be built. JSL-ian Technologies will continue investing in scientific research, engineering excellence, and practical innovation.

Vision inspires innovation.
Rigor makes it reproducible.

Every discovery begins with curiosity.

Every innovation begins with courage.

Every future begins with one step forward.

Its is Your future decides your past; Your past dose not decide your future.

你的未来决定了你的过去，而不是你的过去决定了你的未来。

Founder,

Peter Jing, 荆
